"If You Want to Know What Real Suffering Is, Listen to What I Went Through"

"If you want to see a man who really suffered from indigestion and stomach troubles, I wish you could have seen me before I took Karnak. Why it just seemed like all food was poison to me. "Well, sir, that was my condition when I started taking Karnak, and it is in the general trade, the very first dose of this medicine made me feel better. Now, I haven't a touch of stomach trouble and I never felt better in my life. I haven't the slightest ache or pain since I started taking Karnak, my kidneys are working fine and my circulation that caused my arms and legs to go to sleep is in perfect order. "I have gotten back my old time strength and energy, too. And eat what I wish, I enjoy everything and it seems like I can not get enough. I have had already gained seven pounds. No doctor has ever claimed enough for Karnak."

THE GARDEN

(By JOHN S. GARDNER, Kentucky College of Agriculture)

"JULY" POTATOES The name "July" potatoes is given to that large group of varieties whose seed cut or sets in good planting condition until late June or early July, without resorting to cold storage. Most of the "July" potatoes are McCornicks, but there are several other varieties coming to the market which possess all the good points of McCornick and which are superior to it in quality.

They are Perfect Peachblow, Rose of Arroz, Kentucky Snowflake, and a variety so new it is still nameless, except for the name "French Variety," given it locally. Tests of these sorts made in several sections of the state indicate that they are ultimately all alike with the French variety, which affords a good home potato, if stored away from light and air, is not an acceptable market potato, because of its tendency toward becoming strong when displayed in open air, as growers usually display theirs.

Because July-planted potatoes must contend with hot, dry weather, the seed should be planted deep. Four inches is proper, because hot and dry soil conditions favor the occurrence of soil-borne diseases which should be taken to prevent it. These are to use natural soil as fertilizer sparingly. If at all, and to clean the seed of possible soil-borne diseases with the standard corrosive sulfathiazole treatment.

The size of the seed piece for the "July" potato crop will also bear consideration. The seed pieces should be large so to insure enough moisture to drive the sprouts to the surface. They should weigh one and one-fourth ounces, or be the size of a potato tuber. The shape of the seed pieces, moreover, should be thick and slender rather than thin and slender, so as to give the minimum surface through which evaporation of the moisture in the seed may take place.

FERTILIZING All soil does need fertile ground, the "July" sorts, especially. For this reason, the soil should be supplied with humus to hold moisture through the dry weeks of July and August. Since well rotted manure may cause the crop to be scaldy, it is important to turn under early in the spring any manure that is used, or to substitute rather a "green" manure crop of rye or even a coat of weeds, plowed under at least six weeks before planting time.

CULTIVATION The recommended fertilizer, as for example, 2-8-8 should be used in addition. The method is to sow it in the bottom of the furrow and mix it thoroughly with the soil. The rate is one pound to 20 feet of furrow.

PLANTING The seed should be dropped 15 inches apart, one piece at a place, and it should be covered by throwing two furrows over it, the ridge thus made to be dragged off level just before the sprouts break through.

YIELD All cultivations should be shallow, and the soil should be left level. A 14-inch "garden harrow" is an excellent tool to use, but a sweep that merely shaves the soil is better. Such a sweep can be made from a 14-inch board, one inch thick, passing off into the air, and serves, too, as an additional safeguard against the occurrence of scab.

YIELD The Colorado potato beetle migrates from earlier plantings of potatoes close by, but they may be easily controlled by arsenical dusts or sprays. The Black Flies and the Leaf Hoppers are frequently troublesome enough to give a grower concern, for they stunt the plants, already struggling with lack of moisture. Their control is applying Bordeaux mixture to which arsenical is added. A good plan is to anticipate all these pests by spraying with Bordeaux and poison when the plants are four inches tall, and again in two weeks, and a third time, two weeks later.

SOY BEAN BEETLES CAN BE CONTROLLED

Dr. W. A. Price, state entomologist at the Experiment Station of the University of Kentucky, says the Mexican variety can be controlled if thorough and timely spraying or dusting is done. The fight should begin as soon as beetles or signs of their presence are observed. The poison should be put on the under side of the leaves, which means sprayers or dusters with up-turned nozzles must be used.

If a spray is desired, use ammonium arsenate at the rate of a pound to five gallons of water, or an ounce or two level table-spoons to three gallons of water. One gallon will cover 125 feet of row and 100 gallons an acre. As a dust, use a pound to fifteen gallons of water, or a pound of hydrated lime, or a pound of calcium arsenate, a pound of caliche and 4 pounds of

hydrated lime. Mix well and apply at the rate of a pound to 500 feet of row or 25 to 25 points to the acre. Apply only when plants are dry. Spray or dust two or three times, at intervals of week or 10 days. Spray should not be sprayed after the plants have set.

MORE INTEREST IN POULTRY

Increased interest in poultry raising is reflected in the large prospective course to be given at the University of Kentucky June 29-July 1. This is an intensive course dealing with the problems of practical poultry raising on the farm. It is open to all men and women interested in chickens. Prof. L. P. Payne, of Kansas, one of the outstanding poultry authorities in the country, will be among the speakers. County Agent H. E. Patterson will tell about the development of poultry raising in Grayson county. The visitors will see the poultry plant at the Experiment Station, including the specially equipped incubator, and other modern equipment.

BONANZA

The monthly meeting of the Elks Club was held here Saturday night. A large crowd of guests, including County Agent Ishbel, The program of the evening was presented Saturday night.

Blowing called for order of the day, and the program was presented Saturday night. The monthly meeting of the Elks Club was held here Saturday night. A large crowd of guests, including County Agent Ishbel, The program of the evening was presented Saturday night.

Prof. and Mrs. Wayne Ruffin called the week-end at Bonanza. Mr. Ruffin will be our principal here this week-end.

The memorial meeting was held here Saturday and Sunday by the United Business. A large crowd attended.

Mr. and Mrs. Jerry Hackworth, of Leyton, spent the week-end visiting Mr. and Mrs. Hackworth's parents, Mr. and Mrs. Frank Spradlin, of this place.

Misses Zona Baldrige and Juanita Conley returned from Ashland recently, where they attended the funeral of Dr. W. W. Robinson.

Miss Beatrice Spradlin returned to her home with her family, after spending a few days with her mother here.

Earl and Neva Watkins, of near East Point, were in Bonanza Sunday.

SELLARDS TO BROADCAST

Grady Sellards, held-out in Animal Husbandry, Extension Department, University of Kentucky, and his wife, Maggie Sellards, of this place, will give part in a radio broadcast over station WLAB, Louisville, Wednesday afternoon, July 1, between 12:45 and 1:00 P. M. His subject will be "Hogs As Harvest Hounds."

MAKES APPOINTMENT TO WEST POINT

Francis Scott has received an appointment to West Point, Military Academy, by Congressman A. J. May. His appointment is to fill the vacancy left by Thomas F. Jaglowitz, of Louisville, who was appointed by Congressman Mrs. John W. Langley.

Small Stature No Bar to Great Achievement

There have been a great many short men besides "the little corporal," the five-foot-two Napoleon, who have made their mark in our history. Two of our Presidents were among them, Martin Van Buren and John Quincy Adams. Martin Van Buren was often alluded to as "the little magician," because of his shortness of stature and his mastery of political wizardry. And there was Stephen A. Douglas, scarcely more than five feet tall, affectionately nicknamed "the little giant."

Oliver Wendell Holmes, John Paul Jones and Gen. Bill Sheridan were each five feet; Beethoven was scarcely more than five feet four; John Keats a little more than five feet, and Swinburne and Whitman are given as five feet or so in stature.

Lizards Feast Royally on Eggs of Crocodile

I have sometimes watched monitors, or African water lizards, at their work of robbing the nests of crocodiles. C. R. S. Pittman writes, in Asia Magazine. The ankles of these precious lizards are often broken off as they gnaw about four feet long are most entertaining.

On more than one occasion when I have watched a monitor at work on a crocodile's nest, I have seen the lizard serving the behavior of the guardian females on the breeding grounds. It has been a monitor deliberately probing the nest with its nose, or in pursuit into the water. In the mean time the monitor's mate arrives on the scene, excavates the nest, and soon retreats and begins gobbling up the eggs.

Soon it is joined by No. 1, which had only taken to the water at a rapid pace. The monitor is in the greater portion of the eggs before the return of the rightful owner. Even when forced to withdraw, they will decamp each with an egg in its mouth.

Medical Clocks

Into the making of clocks and their uses has gone much of man's ingenuity and inventiveness. Clocks and performing clocks had a great vogue during the Fifteenth and Sixteenth centuries. In the museum at Paris, there are several of these specimens in which the vibration of the pendulum gradually caused a long tongue to protrude. Other clocks were made to show a whole series of scenes such as processions of the apostles and other characters. Great interest was formerly taken in these toys, and the positions of the heavenly bodies and the days of the week and month. Repeating clocks were also made, and some of these were pulled were prized in the days when the only method of striking a light at night was with flint and steel.

Professors' Crowd, Grew

Called the strongest club in the world, the "Red-Lion club" recently held its annual dinner at Bristol, England, and devoted the evening to the "King Lion," who presided, was ceremoniously addressed as "Your Majesty" by the other lions. The club is a society of men, and the members are called "lions." The club is a society of men, and the members are called "lions." The club is a society of men, and the members are called "lions."

Giraldus

In Seville of Andalusia, Giraldus wrote the history of the beautiful Moorish monuments of Spain. A twelfth century chronicler stretched himself to describe the city of Seville, without Giraldus the city would have been a mere name. Giraldus is the mother and sweetest of Seville, without Giraldus the city would have been a mere name. Giraldus is the mother and sweetest of Seville, without Giraldus the city would have been a mere name.

"Wick" Elm, Claims Victim

How the victim tree was claimed another victim recently was told at the coroner's inquest at Port Talbot, Wales, Thomas J. Richards, thirty-six, had been engaged by the Penryn council to trim the branches. A branch on which he was standing snapped, and he fell 40 feet to the road below. He was a man previously had been killed while cutting away the branches of the same tree under similar conditions. A man previously had been killed while cutting away the branches of the same tree under similar conditions. A man previously had been killed while cutting away the branches of the same tree under similar conditions.

SPECIAL TERM OF COURT CALLED

To Investigate Killings in Magoffin County; Three Arrested

Saltville, Ky.—A special term of circuit court has been called for June 27 to investigate the several killings here in recent weeks, including that of David Wierman, who was shot and wounded in a field. Walter Johnson, Kern Gable and George Prater were arrested in connection with the Wierman slaying. The trouble was said to have grown out of the killing of Frank Plank and Frank Johnson while Plank was cutting depulps in a search for Johnson and his mother.

Another case to be taken up at the special term is the slaying of Kelly Burton and wounding of Jesse Collier near Royalton, shot as they were returning from work in a field. George Arthur Salveys, brothers, and Joseph Salveys, son of the former, were arrested in this and returned here. George Salveys was retained bond, but the other two were refused. The trouble was said to have grown out of a controversy over land.

John S. Layne was a visitor here from Betsy Layne Monday.

EXTRA VALUES

KEEP FACTORIES RUNNING

24 HOURS A DAY

MR. FIRESTONE has made good his statement that if you would work harder—reduce your expenses—give better service—greater values—and sell cheaper—you would sell more goods and make money.

His factories are running twenty-four hours a day, and his semi-annual statement just released shows that he made money.

Firestone do not manufacture special brand tires for others to distribute. They do make a complete line of tires for us—bearing the Firestone name and guarantee—that not only meet the price but beats any special brand tire distributed by mail order houses or others in quality and construction, giving greater values.

We have cross-sections cut from Firestone Tires and others. Come in today and see the Extra Values in Firestone Tires. *Do you save you money and wear your better?*

Firestone gives you these Extra Values at NO Extra Cost

- Gum-Dipping**—The patented process that penetrates every cord and coats every fiber with liquid rubber—minimizes internal friction and heat, greatest enemy of tire life.
- Double Cord Breaker**—Two extra plies of Gum-Dipped cords under the tread—absorbs road shocks—prevents blowouts—assures greater safety and comfort.
- Tread**—Made of non-oxidizing rubber—provides greater non-skid safety and longer wear.

- 58% Longer** Flexing Life
- 25 to 40% Longer** Tire Life
- 26% Greater** Protection against Blowouts
- 56% Stronger** Tread and Cord Body
- 25% Longer** Non-Skid Wear

Great Importance Of Coal Unknown In Washington's Day

George Washington, in the autumn of 1770, rode off to Pennsylvania with the primary purpose of inspecting a tract of 1000 acres of land in that state, intended for him by his agent, Captain Crawford. In his diary, Washington notes that on a certain Sunday, during his visit, he and Captain Crawford peered into a coal mine, one of the first in the world. "True to his love of detail," Washington observes the coal as "burning freely, and abundance of it."

While that, Washington seems to have forgotten coal in the multiplicity of his other interests. Within five years the War of the Revolution was to start, and he time and effort, and after that, the building of the United States' Constitution and the establishment of a permanent form of government required his full attention. He never lived to discover what a world of meaning his unconscious wrote into those final words of his diary, "Abundance of it."

The world's reserves of all kinds of coal amounts to nearly seven and a half trillion metric tons, we learn from the Division of Information and Publication of the United States Bicentennial Commission. Of this mass of latent power, we have in the United States nearly four trillion tons, or nearly 52 per cent of all known coal embedded in the earth. The possession and the use of that coal have utterly transformed the United States and the world since George Washington's day.

In his time, America was a nation of farmers, small traders, and hand

manufacturers. It now is the greatest and richest manufacturing nation in all history. It, during the honors we are to pay him in 1932, Washington could reveal the country that he left behind in war and statesmanship, made possible these forty-eight states of today, grown so rich through business and industry, would first amaze, and then delight him. It would take nothing from his greatness that he cut short his notice of the presence of coal in America with the brief words, "abundance of it."

A few years after the death of Washington there occurred a combination of events such as not the faintest shadow man could have foreseen. It was one of those turns, like the wheel, that almost overnight send humanity on new and upward flights of progress. The 18th century closed, with Washington's death, the 19th immediately began with Watt's invention of the steam engine. The coal to fire it was there "in abundance."

Power machinery, the railroad, the steamship, followed. And within 25 years the world was a thing totally different from what it was when Washington closed his eyes upon it.

The very name of Washington is tied to October Sunday in 1770 was on the site of Connellsville, Pennsylvania, soon to become the greatest coke-producing center in the world. Not so long that he records having received a notice of an invention that you then had been dug and used, that the steam engine had yet to be born from the brain of Watt. Such coal as was mined was used a few miles north about, and Washington had his face on the coin with a casual habit probably reflecting his feeling that the people living near that bed were rather in luck.

The very first coal was burned in a furnace during Washington's lifetime, that is usually supposed. Elsewhere in his diaries he records the purchase of this or that number of barrels of coal. But its real importance was dependent on the century.

The first discovery of coal in America was reported in 1629 by a party of French explorers. They found it near what is now Ottawa, in Illinois. They probably used the coal for cooking, and not as a regular part of their work, according to the United States Bureau of Mines, more than half a billion tons of bituminous coal is mined every year, a quarter of it from Illinois. In an average year, 100 million and a part of a dollar's worth of coal is mined for yourself, and it moves to the industrial system of the country, to manufacturing and to electricity.

Coal was known in Virginia as early as 1770. In 1790 a mine was opened 12 miles above Richmond, but nearly all the coal mined from Washington's time to about 1850 was used for domestic purposes. It was shipping all the way to Philadelphia, New York, and even Boston. It was used for warming the homes and offices of human beings.

From 1820 to 1825, the great coal fields of West Virginia, Kentucky, and Ohio were being discovered. In 1825, an estimated 100 million tons of coal were being mined every year, about 115,000,000 tons of coal. The first Congress of the United States, in the first year of its session, President Washington also appropriated a million and a quarter dollars and authorized the survey with its extraordinary part of that appropriation was for three weeks of the survey of the coal fields of the United States. Not a pound of coal was mined.

An anthracite was first discovered by the way in Rhode Island, in 1790. The great beds of the Wilkes-Barre area were discovered in 1725. Since 1820, according to United States government records, we have mined nearly four billion tons of it to warm Americans. In the same period we mined nearly 10 billion tons of bituminous coal to drive our machines, our ships, our ovens.

SHERIFF'S SALE

FLOYD CIRCUIT COURT

S. C. Ferguson, Commissioner, Plaintiff vs. NOTICE OF SALE

John Prater, Joe Prater, Jr., Jack Ousley and E. S. DeF.

Defendants by virtue of Execution No. 4882, which issued from the clerk's office of the Floyd Circuit Court on June 3, 1931, in favor of S. C. Ferguson, Master Commissioner of the Floyd Circuit Court, against the defendants, John Prater, Joe Prater, Jr., Jack Ousley and E. S. DeF., one of one of my deputies will, on Monday, June 22, 1931, offer for sale at the courthouse in Prestonsburg, Kentucky, to the highest and best bidder, on terms of cash at the end and subject to the following described property:

Situated in Floyd county, Kentucky, in the J. H. Allen addition to the town of Theobald, Ky., in High Beaver Creek, being the portions of Nos. 6, 7 and 7, abutting on High street, as shown by the plat upon file in the Floyd county court clerk's office, less a portion of said land sold heretofore by defendant, John Prater, to Wm. Patrick, beginning at the corner of lot No. 5; thence running with High street to the western corner of lot No. 7; thence about 100 feet to a stone fence and across lots Nos. 6 and 7, to lot No. 5; thence a straight line with lot No. 7 to the beginning.

The amount to be paid under said sale, by the time fixed at \$100.00, which amount includes the balance of the principal of said bond of \$27.00, interest \$9.05, costs \$13.75, and advertising expenses \$14.20. All persons desiring to satisfy these conditions should be required to comply with the terms of said sale hereinabove set out.

Given under my hand as Sheriff of Floyd County, Kentucky, this June 3, 1931.

D. L. STEPHENS, Sheriff by JAMES HUGHES, D. S. Newspaper advertising 113.

MYRTLE

Miss Myrtle, correspondent of the Times, was in the city this past week, conducted by Rev. W. M. Alex. Stephens, Sam. Rice and W. C. Craft.

Miss Myrtle, daughter of Mr. and Mrs. E. M. Stanley, left on the Naper, attended church on Sunday, June 21, at the church of the Rev. Dr. J. H. Allen, and returned to her home in Middle Creek Sunday.

Miss Myrtle spent Thursday, Friday and Saturday in Prestonsburg, attending the funeral of her sister, Miss Helen Stanley, who died on Saturday, June 20, at the home of her father, Mr. J. H. Allen, in Middle Creek. She was the only daughter of Mr. and Mrs. J. H. Allen, and was the wife of Mr. E. M. Stanley.

Need Old Friends

be Soon Forgotten?

The loss of old friendships is probably most often due to friends moving to other localities. Keeping up a correspondence is bothersome and even irksome to many of us, so that these friendships once dear to us are gradually lost.

But this need not happen to you. Thousands of people now know from experience that their telephone is the tie that keeps friendships alive. Your friends, wherever they may be, are as close to you as your telephone. A call now and then to your out-of-town friends will keep these old and dear friendships alive, affording much happiness to you and to them. The cost is negligible. You can talk a distance of 150 miles for as little as fifty cents, using Night Station-to-Station service after 8:30 P. M.

UNDERSTANDING NEEDED

A world that knows more, has more and can do more than ever it could in history—and yet a world more chaotic in thought, hungrier and more helpless than ever before!

Thus that brilliant, young educator, Robert M. Hutchins, president of Chicago University, states the status of this modern age in its quest for learning.

The failure of education, Dr. Hutchins, in an address before the graduating class of Berea College, points out, lies in its inability to create understanding rather than book learning.

Concurring with Dr. Hutchins, we would say that the world of 1931 is but a book-learned fool. A world unable to associate with high ideals its knowledge of the arts, science, history, economics, sociology, and other branches of learning—a poor, pitiful world unable to understand.

Individually, Loeb and Leopold, with their insane thirst for blood, and the Kaiser and Mussolini, as creatures motivated only by selfishness, are outstanding products of a system of learning that fails to probe the heart and touches only the superficial intellect.

Collectively, a world in which financial resources are hoarded by a few against the succor or use of the many, in which millions starve while food products pile up in storage, where millions are unemployed while others prosper—such a world exemplifies the tragedy lying in a lack of understanding whereby an improved order might be brought to pass.

Morally, it is necessary to stress the cultivation of ideals, the process of understanding matters in their true light. Economically—materially, let us say—it is necessary for the world to grasp the great problems confronting it and arrive at a solution leading from industrial and social chaos.

Book learning alone makes the criminal mind only a shrewder one; makes of the financial genius only a grasping miser.

THE COMMUNITY TAX QUESTION

Oakland, California, for the past decade has been exerting itself to encourage the development of industries within its borders. Like all sections of the country, this city has been struggling with a constantly increasing load of taxation.

Recognizing the seriousness of the present tax situation under which large cities have drawn heavily on their taxpayers' resources to make costly municipal improvements, the Oakland Post-Inquirer, in a feature editorial, says:

"Lower taxes will mean higher local prosperity.

"The people of this community are struggling under a tax burden much too heavy.

"This high tax load has reached a point where it threatens to handicap the development of the community. It is certainly a handicap to individual bank accounts.

"To decrease taxes would be a sure way to increase business, to stimulate building operations, to relieve unemployment. "Lower taxes is the most important question now confronting this community.

"Excessively high tax rates do mean in the end lower total income from taxes. They depreciate property values, they discourage new building, they frighten home owners, business men and industries away from a community. They cut down the amount and value of the property that can be taxed.

"Private business is finding ways to lower costs, fixed and otherwise, without lower efficiency, and in the end that may be the depression's great blessing in disguise for private business. Perhaps the same thing will be true of public business."

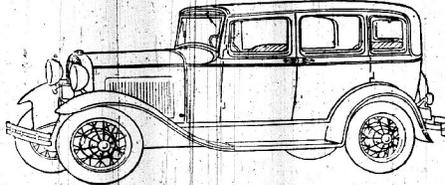

Prestonsburg would do well to give more serious consideration to this same matter. Here, there has never been any concerted effort to foster the development of industries within its limits or nearby. The tax rate, instead, has been increased to such an unreasonable degree that new industry is frightened away.

Any business man knows that more revenue could be obtained by inducing more enterprises to enter Prestonsburg and pay a lower tax rate than by levying an exorbitant rate on the few already here.

KENTUCKY STATE ROAD BUILDING EMPLOYS 5,000

Labor Department Gives Analysis For the Month of May

Louisville, Ky., June 26.—State highway construction in Kentucky involving an outlay of more than \$10,317,250 is providing employment for about 5,000 men, an industrial analysis of Kentucky for the month of May, released today by the United States department of labor, revealed.

The survey made by the Louisville district office stated that employment opportunities in connection with outdoor activities increased during the month and many workers were absorbed on construction projects, municipal improvements and farm work.

"However, employment decreased somewhat during the month in a number of industries," the survey stated. "Many coal mines were idle. A small increase in employment occurred in the textile mills, the majority worked on full-time schedules, but a surplus of this labor existed. There was no marked fluctuation in employment in the lumber mills, several worked part-time and a surplus of lumber-mill labor prevailed. Employment increased in the beverage plants. Employment reductions were registered in the furniture factories; stone, glass and clay products plants; tobacco rehandling plants; railroad repair shops; the iron and steel industry; food and kindred products plants; and several other miscellaneous industries."

Survey by Cities Follows: Louisville—Increased schedules were reported by a number of the principal industries and the majority operated full time. There were employment gains in the lumber mills; furniture factories; stone, glass, and clay products plants; textile mills; tobacco plants; and several other miscellaneous factories retained a number of employees. A general surplus of labor prevailed throughout the month. A water company employed 250 men on construction work and in addition let contracts for immediate construction of a 200,000 gallon steel tank and a

2,000,000 gallon concrete reservoir at an estimated cost of \$1,500,000 which will employ a large number of workers during the summer months. Demands recently issued for new building work of value about \$302,000, which have provided work for quite a number of craftsmen.

Newport and Covington—Eight of the larger plants in Newport reported part-time schedules affecting 3,200 workers; however, there were fewer men employed on a part-time basis in May than during April. Employment increased in the textile mills and hosiery plants, railroad shops, and several other miscellaneous industries and a large surplus of labor was apparent. Approximately 70 workers were employed in Covington on sewer and sewerage work. A limited number of building permits were issued, with no large projects under way.

Lexington and Paducah "Lexington—There was no marked fluctuation in employment as far as concerns what occurred in cigar factories were offset by reductions in several other miscellaneous industries. Practically all plants worked on full-time schedules. Some seasonal concerns were closed and a hardwood lumber mill has not operated for several months. A surplus of skilled and unskilled labor was apparent. A moderate building program was under way which included a number of residences. City street, sewer and sidewalk construction involving an expenditure of \$64,000 was under way, affording employment for a number of workers.

Paducah—Part-time schedules were evident in some of the local manufacturing plants and a considerable surplus of labor was noted in most lines. Employment decreased in the textile mills, tobacco plants, food and kindred products plants, and several other miscellaneous industries.

An employment gain was made in stone, glass and clay products plants. A hosiery mill worked overtime. The volume of unemployment benefited principally of unskilled workers, railroad shovemen, painters and carpenters. Railroad repair shops operated with curtailed forces. The construction of four state highway bridges near this city has furnished employment for approximately 600 men. The farm labor situation in this vicinity was reported as satisfactory.

Owensboro—Part-time schedules prevailed in the manufacturing concerns and employment reductions occurred in the lumber mills; the iron and steel industries; stone, glass, and clay products plants; and several other miscellaneous industries. A surplus of labor was noted in all lines. There was a small building program under way. A surplus of farm help was apparent, but planting of the tobacco crop was started, which should soon absorb a number of these workers.

Ashland—Employment increased in the beverage plants, but this was offset by a reduction in the stone, glass, and clay products plants. All plants were reported in operation, but several worked part-time. A surplus of skilled and unskilled labor was apparent. A fair amount of building was under way, but was not sufficient to absorb the local supply.

The Fan in History "Customs of Mankind" says that "Fans have an interesting history. The first fan was probably a palm leaf or some other natural device appropriated by man to keep away flies or gnats, perhaps even to cool the fevered brow in tropical climates. We know that in Egypt, 2,000 years ago, fashionable hosts had special servants to stand behind dinner guests and fan them with huge papyrus fans. In France the fan reached the height of its development under Louis XIV. We read that fans are inevitable accompaniment of feminine costume and are of rare beauty, exquisitely painted and mounted on sticks of carved or painted wood, mother-of-pearl, carved ivory or gold. There are over 500 makers of fans in Paris and they enjoy special privileges accorded to them by the king."

Another Chinese Wall Another huge Chinese wall has been discovered by the Dr. Sven Hedin expedition. An article by the leader, published in a Stockholm newspaper says: They followed the route over the Mongolian highlands and the Gobi desert. This was the first time that a motor car had been driven from Peking to Moscow without, at any point of the route, encroaching on the territory of the Mongolian republic. The most remarkable discovery from an archeological point of view was a wall of earth and stone, which they could trace for several hundred meters. It was very well preserved in parts, and it perhaps corresponds with the discovery which Mr. Bergman made some time ago of a fortress of the early Han dynasty.

LAWRENCE COURT WITNESS KILLED

Aged Merchant Shot To Death Last Week in Lawrence County

The body of John Adams, 85 years old, posthumous Lawrence county juror and witness, was found in his home on Town Branch Wednesday afternoon of last week. Adams is brother of John Adams. He had been shot to death.

Adams was a witness in the trial of a man named Adams, charged with carrying off the several hundred dollars. The trial was held on the day Adams was found, when the witness to appear in court John Adams and his brother were shot in the back of the head while Adams was in the car in which Adams was being taken to court.

Adams was known to have had some money on the body, which was kept in a box. The box was found open and taken to the county. His name was also known to the jury. Adams was shot in the back of the head while Adams was in the car in which Adams was being taken to court.

Extended Stay in Mud Cure for Skin Disease

Possibly the most interesting bathing places of the Philippines are those of the hinterland of Mindoro, C. A. Freeman writes in the Boston Post. These places are most mud holes adjacent to hot springs and are patronized by the wild Manyan tribesmen and their families. A single travel is productive of various skin diseases and when the Manyan becomes too itchy to stand it any longer, he arranges for the direction of his fellows to enter the mud.

Around him are placed floating pillows of grass and bales provided with various materials. Over his head is a parasol and a gourd of water is close by. Frequently the bath makes a good stop in the mud and when he ceases to plunge in a river, he finds that his outer skin entirely has peeled off.

Mindoroan rivers near settlements are important the "mudholes" are to be found. These are made of mud and water, and are very sticky. The mud is so close together as to defy the passage of even a crow's nose and the edge the community before without fear. Usually there is a sporting attendant on duty and if a sporting "man" (prostitute) comes too close he receives a jab in the eye.

"Artillery" Before the Advent of Gunpowder The Roman ballista was much like the Roman catapult. It consisted of a strong wooden frame, in which a stone or shaft of animal claws were placed with sticks. The ends of the sticks were joined with a string, and a spring in the table served as the force of propelling force. The missile, consisting of a log, beam or stone, was in the trough, and the beam was raised by a heavy material for the purpose of launching the missile. The ballista was used for heavy material for the purpose of launching the missile. It was particularly used for heavy material for the purpose of launching the missile.

Immigration Not Wanted The Literary Digest reports as interesting the fact that Alaska immigrants will be introduced to this country. The Alaskan mosquito, it was said, breeds in the water, and it might here it might breed in water as well as summer and torment as the ground. As a matter of fact, says the Digest, Alaska has been open to immigration since 1892, and it is in this that the cross-breeds. They are as tender and susceptible to cold as our own. There is some apprehension that the Kodiak bears, foreign a migration to this region, but who is afraid of mere bears? Detroit News.

Inventions That Won Favor Who invented the penny-in-the-slot weighing machine? Why, Mr. George Carter of Bath, who died penniless, as you might say, leaving only a pittance of \$10,000. And who invented the rubber wheel? It was none other than Mr. Joseph Hudson, who took upon a started world of burglary in 1881 with his spirit masterpiece, and at once secured a contract for 21,000 of his products. Today there are 600 different types of wheels, all manufactured by the firm which Mr. Hudson founded. London Answers.

Varieties of Snakes The copperhead is not a species of rattlesnake and has no rattle, though his many different kinds of snakes it vibrates its tail against the dry leaves, and makes a noise similar to the rattle. It is smaller than the average rattlesnake, reaching an extreme length of three or four feet. Various observers have stated it does not strike of itself, resting an extreme length of three or four feet. Various observers have stated it does not strike of itself, resting an extreme length of three or four feet. Various observers have stated it does not strike of itself, resting an extreme length of three or four feet.

New Timepieces to Her Mary, age eight, moved from Irving to a small town in Indiana. There were factories there, with their accompanying whistles. Occasionally when a whistle blew, Mary heard some such remark as: "It must be just twelve." "Some clock must be slow, for there is the seven o'clock whistle." No one realized Mary was puzzled until one day she said: "You know, I can't tell the time by the whistles." Indianapolis News.

Consider your Adam's Apple!!* Don't Rasp Your Throat With Harsh Irritants

"Reach for a LUCKY instead"

When you visit your physician for your periodic health examination, one of the very first things he asks you to do is to open your mouth wide, and to say "Ah." He is examining the delicate lining of your throat. "Ah!" There is not a man or woman who could even make this simple sound, if in the throat there were no Adam's Apple. For your Adam's Apple is your larynx—the voice box containing your vocal chords. And what a delicate piece of Nature's handwork the Adam's Apple is. A slight cold—even a tiny particle lodged in the throat—and our voice often grows husky. In acute cases, we may even lose our voice for several days. Don't rasp your throat with harsh irritants—Reach for a LUCKY instead—remember, LUCKY STRIKE is the only cigarette in America that through its exclusive "TOASTING" process expels certain harsh irritants present in all raw tobaccos. These expelled irritants are sold to manufacturers of chemical compounds. They are not present in your LUCKY STRIKE. No wonder 20,679 American physicians have stated LUCKY to be less irritating. LUCKIES are always kind to your throat. And so we say "Consider your Adam's Apple."

"It's toasted"

BONANZA

Class weekly correspondence. The Robinson. The death of Dr. T. W. Robinson brought sorrow which can not be expressed to all this community. He was one of Bonanza's finest young men, of whom we have been proud. We realize that Bonanza has lost one of its finest, most worthwhile young men that it has ever had, our sympathy is extended to his family. A large number of people from Bonanza attended the funeral, which took place at Ashland.

BIRTHDAYS

Mrs. H. B. Bredford and Mrs. Thomas Staudy celebrated their birthdays last week. A large number of friends and relatives were present. Misses Marie Spradlin and Venus Mann were shopping in Prestonsburg, Wednesday. Alec Martin, of Allen, was a visitor here Thursday. Thomas W. Hill returned, Monday, from Pikeville, where he has been attending college for several months. Boyd and Joe Holbrook and Thomas Miller were in Bonanza Sunday. Miss Dora, Bredford, returned to Prestonsburg Saturday.

FRAZIER HUNA TO TELL OF RAIDS BY BANDITS

"Down in Mexico, some years ago, three men and their wives lived on an isolated plantation, twenty miles from the nearest town. Frazier Huna, world rambler and war correspondent, was one of the three men, and he will tell the story of how Yaqui bandits raided the plantation when he tallied during the weekly "scholarship" (Castro) hour over WSAZ on Thursday, July 2, at 8 p. m. Frequently, Huna's stories are tinged with pathos and tragedy, for he has witnessed, in and out of the battles, fields and in the far places of the earth, but the story of how he saved his life in the Mexican bandit raid is a story with a laugh. An unusual musical program, arranged and directed by Frank Black, will complete this entertaining program, which is sponsored by your local Chevrolet dealer.

666 LIQUID OR TABLETS

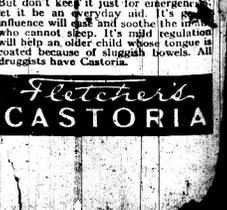

Relieves a Headache or Neuralgia in 20 minutes. Checks a Cold the first day, and checks Malaria in three days. 666 IS A LIVE FOR BABY'S COLD.

When BABIES are upset

BABY ill and ailments seem twice as serious at night. A sudden cry may mean colic. Or a sudden attack of diarrhea. How would you meet this emergency—quickly? Have you a bottle of Castoria ready?

For the protection of your wee one—for your own peace of mind—keep this old, reliable preparation always on hand. But don't keep it just for emergency. It's a baby's best friend. Its gentle influence will soothe and soothe the baby who cannot sleep. It's mild regulation will help an older child whose tongue is coated because of sluggish bowels. All druggists have Castoria.

Here's Help for Tired Treasurers of Clubs Who Need More Money

The treasurer's report... having been duly consumed and agonized over the annual summer campaign to raise money...

In New York state one enterprising group of women found an effective means. For the sum of twenty-five cents they were able to sell waffles and syrup...

An empty shop was rented, and long tables set up. All the waffle irons of the members were assembled and lined up on a long table...

In the middle west a different sort of bake-sale proved an asset. Instead of allowing every member to bring whatever she liked, one recipe was chosen...

Advise the recipes which result in quick-selling foods at the lowest possible cost are most in demand...

MRS. JARVIS' JELLY ROLL

3 eggs, 1 cup baking powder, 1 cup sugar, 1-2 tsp. salt, 1-2 tsp. lemon flavor, 2 tbsps. corn oil, 1-3 cups pastry...

Beat eggs until very light, then beat in sugar. Add water and lemon flavoring and salt together and fold into eggs...

BAKESHOP DOUGHNUTS

1 egg, 1-2 tbsps. corn oil, 1-2 cup sugar, 1-2 tsp. nutmeg, 1-4 cup milk, 4 cups pastry flour, 1 tsp. salt...

Beat eggs well, stir in oil and add sugar. Stir in one-fourth cup milk and beat with egg beater one minute...

ECONOMY SPICE CAKE

2 cups pastry flour, 1 cup brown sugar, 1-2 cups water, 1-2 cups bread flour, 1-4 cup corn oil, 1-2 tsp. baking powder, 1 tsp. nutmeg, 1 tsp. cinnamon, 5 tbsps. lard, 1 tsp. salt, 1 cup raisins...

STEPHENS BRANCH

Mrs. Jane Patton and daughter, Lou Jean, Alma Marshall and Joann B. Clarke were in Martin Monday evening...

Misses Alma, Myrtle and Dolly Marshall, Kernell Conley and Charlie Compton were visiting in Maytown Saturday night.

DRESSMAKING

I am now prepared to do dressmaking, alterations, repairs, etc. Formerly with Treasurers Dry Cleaning Co. Prices reasonable, and all work guaranteed satisfactory.

Spaniards Found by Spaniards Back in 1781

It was into the hands of Don Felipe De Neve, who ruled as the Spanish governor of the province of California in 1781, that Carlos III, king of Spain, entrusted the duty of founding Los Angeles.

In order to establish in California of the south a new settlement, it is related that Don Felipe came from the capital at Monterey with a military escort in the mission of San Gabriel late in August, 1781.

Don Felipe and his escort spent several days at the mission and then, on the morning of September 4, set out upon a march which took them through the mountains westward to that spot which is still the plaza of Los Angeles.

Boomerang Long in Use as Weapon of Warfare

An article in the Encyclopedia Britannica on the boomerang or the Australian aborigines mentions various peoples that have used a similar instrument. In the present day it is most often used in the north-western parts of Australia.

Easy to See Difference

A writer in the Detroit News is responsible for the following story, showing a characteristic viewpoint of the fair sex: "A man took a girl friend of his out to lunch one day. He said nothing to his wife about it. Why do so? There was no harm in the lunching."

The Suffrage Bogy

Some of the arguments against woman suffrage in Massachusetts are recorded in "Lucy Stone, Pioneer of Woman's Rights," by Alice Stone Blackwell. "One member of the legislature said that when a man came home tired at night, he did not want to kiss a member of the school board or an overseer of the poor."

Wrong Move

Little Frank, who had removed with his family to a new house, was taken to visit the new tenants of the old home, with whom his mother was on friendly terms. "The chief object of interest was a recently arrived baby. Frank was much taken with the infant, and on his way home remarked: 'Mother, it's a pity we moved from that house. If we'd stayed a bit longer we should have got that baby.'"

Miss of Her Own

Marjorie had developed a sudden dislike for going to bed. She admitted that she was afraid of the dark. An aunt who was visiting in the hospital said to the seven-year-old Robert: "Bob, you haven't been putting ideas into Marjorie's head and making her afraid to go to bed, have you?" "Of course not," said the boy. "She is five years old and has ideas of her own."

Your Job

Idleness seldom fails to the lot of a man who is always on his toes, no matter what his occupation or his profession. Every man is measured by the way he does his work. His job is always as good as he himself makes it.

MANY UNUSUAL FEATURES PLANNED FOR FORD DAY Saturday, June 27th

HEALTH NEWS Compiled by Dr. Marvin Ransdell Director, Floyd County Health Dept.

STATE BOARD OF HEALTH ON GUARD TO PREVENT TRAGEDY

During the last week in May, eastern newspapers carried an article about "Wedding Feast Deaths." A wedding feast should be a symbol of joyousness, but this family wedding party caused the death of typhoid, of the bride and the bride's aunt.

A friend of the family, a woman 71 years of age, came in to help prepare the wedding supper of this happy occasion in New York City. She prepared the chicken salad, and all unwittingly she transmitted on her hands the disease germ of typhoid fever and caused the death of the two members of the family and the illness of three guests.

An investigation of all the persons handling the food at the party showed this woman to be the carrier, and she must now conform to the health laws of New York City in order to prevent her transmitting the disease to other persons in New York City.

There are close to 3,000 germ carriers in the United States, many unaware that they are a constant menace to persons with whom they come in contact. "Though typhoid and diphtheria carriers are the most numerous, several other diseases have been found frequently in carriers. These include dysentery, cholera, spinal meningitis, scarlet fever, infantile paralysis and malaria."

WESTERN ENGINEERS DEVELOP LOW-COST BRIDGES

The progress with which western engineers have made and are making in improving their secondary or farm-to-market roads with United States funds is available should be of interest to farmers in all sections of the country.

Low-cost, bituminous treatments of soil, gravel and broken stone roads constitute in a large measure the methods adopted by the western states to secure mudless and dust-free farm-to-market roads built and maintained at reasonable cost.

Good farm roads are closely identified with the national oil program that will assure a continuous supply of an indispensable road building material.

and must have nothing to do with food preparation. In Kentucky, the State Board of Health has issued orders to all typhoid and paratyphoid carriers. Only two or three of these have been known to have caused epidemics. But each one of the others is a potential menace and on each one rests the responsibility of care of his person and habits in such a way that he does not come in contact with or handle food which may be consumed by other persons.

The State Board of Health and the full-time county health departments are extending the examination of food handlers for typhoid carrier condition to every one who is employed on dairy farms, in milk or ice cream plants, restaurants and bakeries.

First direct evidence of germ carriers was produced in 1902 by Doctor Robert Koch, and on the basis of his discovery, prevalence of the conditions throughout the world soon became known.

Notable among germ carriers was the famous "Typhoid Mary," a woman held responsible for innumerable fatalities, but never ill herself. Her case attracted such wide-spread attention because she moved about the United States, spreading the disease from city to city, that the Federal authorities became interested in it.

A typhoid carrier may harbor germs for a lifetime without suffering any ill effects. Treatment is of little avail. The subject must be isolated, must be given personal cleanliness and

Liar

There is at least one Judge in Kansas City who knows his birds. First off, they brought a blackbird into court on the charge of chicken eating.

"What made you steal that chicken?" demanded the learned judge. "Was it because you were really hungry?"

"No, suh," replied the blackbird. "Ah can't say as I was hungry. Ah done stole dat chicken for a hick."

"There is no resemblance whatever," snapped the judge and noted out a five-day sentence with the proviso that the dork spend it reading a hick book.

These Good Old Days It is the foolish and ill-informed that shrinks from knowledge of what has been, and suffers from genuine dread of what is yet to be. It is only the mentally and spiritually humped—proselyting of evil to come—who believe that all change in our own day must be for the worse, and who long for the "good old days" of their grandparents—Albert Shaw in device of jesters.

Re Lockwood, of the Kentucky West Virginia Gas Company, was a business visitor here from Louisville Monday.

Unique Theater--Program

OFFERING FOR WEEK OF JUNE 26, JULY 2

FRIDAY—EDMUND LOWE and JEANNETTE McDONALD in a sparkling picture that's ultra-modern from start to finish—

'DON'T BET ON WOMEN'

SATURDAY—GEORGE O'BRIEN in a tense drama of the sea—

'Seas Beneath'

SUNDAY and MONDAY—CHARLIE CHAPLIN, screen genius and past master of comedy, in the greatest of a long list of triumphs—

'CITY LIGHTS'

TUESDAY and WEDNESDAY—RICHARD DIX in with IRENNE DUNNE, ESTELLE TAYLOR, WM. COLLIER, JR., and NANCE O'NEILL.

'Cimarron'

Adapted from the famous Edna Ferber novel of the same name, "CIMARRON" is acclaimed the most sensational screen creation in years. A picture which, though stupendous in scope, one can sit through, tense with interest, spellbound by swift drama and tender romance of the enthralling story.

THURSDAY—CLARA BOW in one of her most popular pictures—

'NOLIMIT'

Starting Time: MATINEE 2 P. M. NIGHT 7 P. M.

The theater is modern, cool, clean and comfortable, and only the highest grade pictures are shown.

How to train BABY'S BOWELS
Babies, bottle-fed or breast-fed, with any tendency to be constipated, would thrive if they received daily half a teaspoonful of this old family doctor's prescription for the bowels.
That is one sure way to train tiny bowels to healthy regularity. To avoid the fretfulness, vomiting, crying, failure to gain, and other ills of constipated babies.
Dr. Caldwell's Syrup Pepsin is good for any baby. For this, you have the word of a famous doctor. Forty-seven years of practice taught him just what babies need to keep their little bowels active, regular, keep little bodies plump and healthy. For Dr. Caldwell specialized in the treatment of women and little ones. He attended over 3000 births without loss of one mother or baby.
